MT DISTRIBUZIONE: **Not just product distribution**

We maintain a constant commitment to train our professionals and ensure that they are constantly capable of operating with new technologies. We are always in step with the times and updated on the latest cutting-edge solutions in the sectors in which we operate.

Our B2B e-commerce offers more than 100,000 products. We ship all over the world and guarantee fast deliveries throughout Italy.

Our team of experts offers highly specialized pre-sales consultancy, providing technicians and installers with all the information necessary to select the products best suited to their specific needs. After the purchase we continue to be at our customers' side with first-rate after-sales technical support.

HOME & BUILDING AUTOMATION

IntesisTM
BY HMS NETWORKS

Intesis excels in the creation of innovative technological solutions for system integration, with particular focus on air conditioning interfaces and communication gateways. The acquisition by HMS Networks in 2016 strengthened its position in the industrial communication and IoT sector, broadening its prospects for growth and innovation in the global market.

elsner

Elsner stands out for its flexible, intuitive and refined home automation solutions. The production, entirely carried out in the German headquarters, makes use of highly qualified personnel and cutting-edge technologies. This approach guarantees a consistently high quality standard, reflecting the excellence of German engineering.

WEINZIERL

The heart of Weinzierl's offering lies in its sophisticated Stack implementations, designed for a wide range of standardized devices. Weinzierl stands out particularly for its expertise in the types of communication specific to the KNX protocol, thus consolidating its reference position in the advanced home automation sector.

•Zennio

Zennio establishes itself in the home automation sector with devices that combine innovative design and superior technical performance. The company offers customizable smart solutions to transform homes into comfortable and sustainable environments, focusing on advanced features that optimize home control and energy efficiency.

ekinex

Ekinex devices, entirely developed and produced in Italy, are based on the KNX standard, ensuring flexible and decentralized home automation. Ekinex stands out for its ability to integrate cutting-edge functionality with refined aesthetics, creating solutions that optimize the efficiency of spaces.

 **DOMOTICA LABS**
l'intelligenza è di casa

Domotica Labs, an Italian company specialized in smart solutions, excels in the design and development of systems for remote control and intelligent control. Its offering ranges from the management of individual electrical sockets to complex systems for entire buildings, using the most widespread standard protocols.

Lingg & Janke

Lingg & Janke focuses on improving the safety and adaptability of buildings, both residential and commercial. The systems integrate sensor learning algorithms and intuitive interfaces to create environments that proactively respond to user needs. While using complex technologies, the products are designed to be accessible to all.

arcus-eds
electronic design services

Arcus-eds, a leading German company in the climate control sector, stands out for the production of practical and versatile KNX components. Its catalog offers a complete range of diversified devices for specific applications, including probes with room controller, components for primary circuits and outdoor solutions.

eeelectron[®]

Eelectron has a strong presence in the hotel market. The company has installed its systems in over 28,000 rooms across 72 countries, demonstrating significant global reach. The success of the brand is based on an impressive list of references and a wide range of products. Its KNX solutions cover all aspects of hotel automation.

blumotix
TOUCH YOUR WORLD

The strengths of Blumotix include technical sophistication, meticulous attention to detail, intuitive installation and ease of use. Choosing Blumotix means opting for products that represent the perfect balance between cutting-edge functionality and refined aesthetics, satisfying the highest needs in the field of home automation.

Satel[®]

Satel excels in the security and automation sector, offering solutions that combine modernity, elegance and reliability. The company stands out for the design, production and sale of a vast range of advanced devices for security, remote control and building automation systems.

Inim stands out in the safety and automation sector with cutting-edge systems that integrate innovation, safety and comfort. The company develops latest generation solutions in the fields of anti-intrusion, fire detection, home automation and emergency lighting. Inim products offer advanced protection and automation for residential, commercial and institutional facilities.

Thinka offers centralized and secure control of all KNX devices. Its distinctive feature is the ability to seamlessly integrate KNX technology with the main voice assistance platforms such as Apple HomeKit, Siri and Google Home. This allows users to manage their home environment intuitively and vocally, raising the living experience to new standards.

Jung offers a complete range of solutions, from switches to security systems, from intercoms to wireless applications, up to KNX home automation systems. All Jung products are characterized by a coherent and functional design, responding to the different needs of users with integrated solutions that transform spaces into intelligent and safe environments.

Nice's excellence in the fields of Home Automation, Smart Home and Home Security is expressed in products that offer integrated and complete management of the home. These solutions transform homes into intelligent ecosystems, optimizing comfort, safety and energy efficiency through interconnected systems and intuitive interfaces.

Fibaro, part of the NICE S.p.a group, establishes itself as a leader in smart home solutions. The company offers a range of innovative products such as controlled sockets, actuators and dimmers, all based on the Z-WAVE standard. This technology ensures flawless wireless communication between devices, creating an integrated, modern and secure home ecosystem.

Siemens AG is a German industrial giant founded in 1847, headquartered in Munich. The company is a global point of reference in the fields of electrification, automation and digitalisation, with a widespread presence in around 200 countries and a workforce of over 300,000 employees.

Theben boasts a large catalog of solutions focused on improving living comfort and optimizing energy savings. The company offers systems for regulating time, lighting and air conditioning, integrated into a building automation ecosystem based on the KNX standard.

ThinKnx stands out with a multiplatform interface that combines simplicity and customization. The system offers intuitive and complete control of the various home automation functions. Its main feature is the ability to interact freely with Apple, Android and Windows devices, guaranteeing users a fluid and consistent control experience on any platform.

MDT Technologies produces a wide range of products ranging from power supplies and binary inputs to actuators, intelligent buttons, presence and movement detectors. The catalog also includes weather stations, touch panels and dimmers, thus covering all home and building automation needs.

Merten is synonymous with innovation, quality and refined design. The company is renowned for its pioneering, carefully engineered solutions to make buildings smarter and more efficient. The Merten product range ranges from high-quality switches to sophisticated motion detectors, culminating in complete automation systems based on the KNX standard.

Controltronic excels in the production of home automation tools that combine practicality and elegance. Controltronic products allow integrated control of lighting, shutters, climate control, multimedia systems, as well as providing advanced visualization and facility management functions.

Spinetech stands out as an integrated and modular home automation system, characterized by efficiency, safety and interactivity. Its strong point is the advanced supervision software, which allows complete management and precise monitoring of all the devices and functions of the smart home.

Steinel has established itself as a leader in sensor-based lighting control technology. It offers residential, commercial and industrial solutions, integrating advanced technologies into functional designs. Steinel products are not limited to lighting control, but optimize energy efficiency, improve the safety and comfort of environments.

MARSS excels in advanced research in the field of security systems, offering innovative solutions through its IP Modules. These devices allow you to remotely manage any anti-theft system, regardless of make or model, using portable devices and guaranteeing maximum security thanks to the SSL3 protocol.

Freedompro offers Easykon, an innovative bridge for home automation systems. This device integrates perfectly with BTicino MyHOME and KNX systems, allowing their connection with modern smart home technologies such as Apple HomeKit, Amazon Alexa and Google Assistant. It also offers advanced features such as voice control and remote management.

AlarmHub offers a system based on a ready-to-use radio transmitter that does not require electricity, GSM or Wi-Fi connection. The device is capable of detecting and communicating changes in the state of four separate inputs. Its independence from external networks guarantees continuous monitoring even in blackout situations or in areas with poor network coverage.

ELAN by Nice offers a solution that unifies multiple home functions into a single platform. The system ensures a consistent interface across all control devices, allowing users to choose their preferred interaction mode. This technological convergence simplifies home management, optimizes energy efficiency and enhances security.

Gira has had an established presence in Italy since 2011 and offers intelligent and sustainable solutions for buildings of all types and sizes. Gira Smart Home systems guarantee comfort, safety and flexibility, allowing high customization and contributing to energy saving.

Ilevia offers integrated and intelligent control of buildings, with particular focus on the management of electrical systems. Its flexible architecture and intuitive interface allow complete supervision of all aspects of the environment, from lighting to security. Ilevia is characterized by its versatility and scalability, integrating with different devices and protocols.

MEAN WELL stands out as one of the few global manufacturers entirely dedicated to the power supply sector. The company excels in the development, production and sale of high-quality standard power solutions. MEAN WELL offers a wide range of applications, from industry to lighting, from automation to renewable energy.

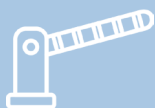

Lunatone stands out for its expertise and passion in the field of advanced technologies and pioneering systems. The company has extensive experience in key industries such as computing, power electronics, device design and software development. It boasts an innovative team and a collaboration with the Technical University of Vienna.

DIVUS offers innovative and technologically advanced smart home solutions. DIVUS products are designed to ensure enhanced safety, superior reliability and optimized comfort. This triple focus translates into devices that not only automate the home, but transform it into a safer, more efficient and pleasant space to live in.

Elausys focuses in particular on the hotel sector. Its offer includes a complete range of intelligent automation products, designed to improve guest comfort and the energy efficiency of hotel facilities. Elausys solutions stand out for their ability to integrate various aspects of building automation.

GATE & DOOR AUTOMATION

Nice offers a complete range of solutions for the automation of gates, garage doors, road barriers, awnings and shutters. Nice products stand out for their advanced technology, ease of use and integration with smart home systems. Nice combines high performance, safety and elegant design, allowing automation control via smartphone or voice commands.

FAAC offers a complete range of solutions ranging from automations for gates and barriers to automatic entrances and doors, from motors for roller shutters and awnings to parking and access control systems. FAAC's innovative approach translates into technologically advanced but intuitive and easy-to-use products, while essentiality is reflected in elegant and functional solutions.

Roger Technology has launched the innovative Roger Brushless line. This range of products stands out for the use of brushless motors and advanced digital technology, offering superior performance in terms of energy efficiency, silence and reliability. Complete digitalization allows precise and customizable control, ensuring smooth and safe movements.

Fadini gate openers stand out for the use of hydraulic technology. This solution guarantees considerable installation flexibility, adapting to different gate configurations. Furthermore, it ensures silent operation, improving acoustic comfort. The most relevant feature is the high level of safety, with a highly effective anti-crushing system.

CAME is a company in the home automation sector that offers integrated solutions for the automation, control and security of domestic environments. CAME systems guarantee comfort, energy efficiency and advanced system management, improving the quality of life in modern homes.

BFT excels in engineering innovation, creating advanced and unique solutions that balance technological complexity and ease of use. Their products stand out for their robustness and versatility, offering cutting-edge technologies accessible to all.

Benincà excels in combining tradition and innovation in the field of automation, exploiting synergies and know-how shared within its group of companies. This interdisciplinary collaboration enables the development of cutting-edge solutions that improve both the efficiency of automation systems and user safety.

GIBIDI is an Italian company that boasts a presence in over 40 countries. It stands out for its profound technical knowledge and consolidated expertise, which translate into high quality products and innovative, cutting-edge technological solutions. GBD offers versatile and customizable systems, suitable for different applications, from residential to industrial.

Topp stands out for its offering of automation systems for doors and windows that combine elegance, innovation and functionality. The company provides a complete service, from initial consultancy to final installation through selected partners, guaranteeing customers maximum freedom of movement and a superior user experience.

Genius, a brand of the FAAC group, stands out in the production of high quality automations. Key innovations include the G-Way system, based on Bus technology, which significantly simplifies the installation process, and the virtual encoder, which enhances operational safety.

C.C.E. excels in the production of automatic door sill seals and anti-impact safety devices for automatic doors. The company stands out for its ability to offer customized solutions, thanks to an advanced technical office equipped with 3D prototyping technology.

Ancellotti Elettromeccanica began its business with the mass production of an innovative device for the electric opening and closing of shutters. Over the years, the company has significantly expanded its offering. Today, Ancellotti offers a diverse range of products that includes advanced solutions not only for shutters, but also for windows and garage doors.

Allmatic stands out for the entirely made in Italy design and production of a complete range of innovative solutions. The company places customer satisfaction at the center of its philosophy, offering products that excel not only in functionality, but also in ease of installation and programming.

Cardin Elettronica stands out for the entirely Italian production of a vast range of automations for gates, doors and security systems. The company's confidence in its production is highlighted by the extended 36-month warranty on original products, underlining its commitment to excellence and reliability in the automation sector.

AB TECNO stands out in the control and safety accessories sector as an importer of products from European companies such as JCM, XPR and WITT. In 2015, the company took a strategic step by registering the ABEXO brand, under which, since 2019, it began to develop and market its own products.

Abexo operates in the signaling, command and access control sector. The company aims to create a product catalog that establishes itself as the most complete, specialized and innovative in the field of accessories for automation and access control. This vision materializes in the offer of a range that covers every possible need of the sector.

JCM Technologies offers electronic access management and security solutions, with a specialization in residential, industrial and commercial door systems. The company has achieved a leading position in the European market, establishing itself as one of the most renowned brands in the sector. Its presence extends to over 40 countries.

XPR's products range from access control to home automation, including equipment for mechanical, electrical, electronic and magnetic locks. XPR's strength lies not only in the variety of its offering, but also in its cutting-edge production capacity, made possible by strategic partnerships and owned factories.

WITT boasts a broad portfolio of products, the result of consolidated experience. The company's offering includes advanced safety sensors, innovative accessories and gate automation systems, all compliant with the latest technical standards. A strength of WITT is its considerable operational flexibility, which allows it to efficiently manage orders of any volume.

Tau stands out in the automation sector for gates, garage doors and road barriers. Tau products include motors for various types of gates, access control systems and security accessories, suitable for both residential, commercial and industrial applications. Tau integrates smart features into its products, allowing remote control via mobile devices.

Window Automation Industry was born from the strategic merger of Asa and Mingardi, combining their specialist skills. Asa excels in the automation of shutters and awnings, while Mingardi is renowned for the automation of windows, domes, sunshade systems and smoke extraction components.

RIB is a leading Italian company in the production of automatic systems for gates, barriers, shutters and overhead doors. It stands out for its excellence in both the industrial and civil sectors, combining technical know-how and refined design. With a global presence, RIB offers cutting-edge solutions that guarantee reliability for installers and safety for end users.

Sommer excels in offering home automation solutions that improve daily comfort. The company stands out for its attention to detail and its wide range of intelligent and intuitive products. Its solutions include systems for opening gates with remote control, lighting control and door automation.

Unistab establishes itself as a certified solution for pole installations, standing out for the absence of drilling. This versatile system greatly simplifies the work of installers, ensuring reliability and compliance with safety standards. Suitable for different applications Unistab preserves the integrity of the poles and is suitable for both permanent and temporary installations.

Armas stands out in the industrial automation sector for its entirely Italian production, specializing in high-quality solutions for access control and industrial closures. The company combines manufacturing tradition and technological innovation, offering products that meet the most sophisticated needs of professionals in the sector.

Domotime is a leader in the supply of components for automatic gates, offering a wide range of high quality products. Its catalog includes racks of all types, advanced electronic devices, control units and flashing lights. The careful selection of essential accessories and additional components allows you to satisfy every specific installation need.

NoLogo produces quality accessories for automation and safety, standing out for consultancy, assistance and availability. Recognizing the complexity of the sector, characterized by continuous technological evolution, the company is committed to creating highly compatible products.

Sesamo establishes itself as a leading company in the design and production of high-quality innovative automation systems. Its rigorous quality management system is the foundation of its excellence. Sesamo is not limited to being a simple supplier, but acts as a reliable consultant, offering customized solutions and expert support.

ANTI-INTRUSION

Inim establishes itself as a leader in the anti-intrusion sector, offering security solutions for residential, commercial and institutional environments. The company offers a complete range of anti-intrusion systems, which includes alarm panels, sensors and control devices. Inim stands out for its integrated approach, combining anti-intrusion functionality with home automation and fire detection.

Elkron offers a complete range of products certified and compliant with European regulations, suitable for both residential and commercial environments. Elkron anti-intrusion systems stand out for their versatility, ease of use and high performance, including cutting-edge alarm panels, sensors and control devices.

Satel emerges in the anti-intrusion sector, offering advanced security solutions that stand out for their professionalism, functionality and versatility. Satel products integrate perfectly with remote control and building automation solutions, allowing integrated management of the home.

BEWAVE by SATEL is an all-in-one wireless home automation system that integrates security and automation for your home. Thanks to advanced ABAX 2 technology, it offers quick installation and intuitive configuration via a user-friendly app. BEWAVE guarantees comfort, energy efficiency and a high level of safety.

Daitem, a brand of the Hager group, has innovated the security sector by offering protection systems for domestic and professional environments that combine a high level of protection with remarkable ease of use and flexibility. Belonging to the Hager group allows Daitem to integrate cutting-edge technologies into its products, guaranteeing superior performance and reliability.

Ajax establishes itself as the most awarded wireless security system in Europe. The strength of the system lies in its sophisticated digital algorithms and models based on multiple factors for threat detection. This advanced technology dramatically reduces the likelihood of false alarms, ensuring reliable and precise protection.

Politec develops solutions that aim to intercept and stop potential intruders before they can access the protected area. Politec systems create an invisible but highly effective barrier, using active infrared rays to promptly detect any intrusion attempt. They are also precise, reliable and resistant to various environmental conditions.

DEA Security specializes in advanced perimeter anti-intrusion systems. The company's offering is divided into two main categories: external detection systems, which create a first line of defense around the property, and internal detection systems, which provide an additional level of protection inside the building.

Eldes offers wireless anti-theft systems and products that combine quality and economic convenience. It stands out for the ease of installation of its systems and for the exceptional radio range, which can reach 3 km in an open field, ensuring installation flexibility and adaptability to different environmental configurations.

Venitem produces signaling and alarm devices for anti-theft and fire prevention systems. Venitem's offer includes wired and wireless alarm sirens, versatile power supplies, relay boards, optical-acoustic panels and intuitive accessories such as radio controls. All products are characterized by compliance with the latest regulations, ease of use and refined design.

Vimo stands out for its cutting-edge detectors, designed to offer effective protection in different environments. The Vimo offer also includes specialized power supplies, relay interfaces and complementary accessories, all designed to optimize the performance of security systems. The company's commitment to certified quality and technological innovation is reflected in every product.

Naria Security stands out for the innovative use of plastic fiber optic cables. It is known for its durability, ensuring reliable performance in various environmental conditions. A key selling point is the extraordinary ease of installation: a connector can be installed in less than a minute, without the need for specific equipment.

CIAS stands out nationally and internationally in the production of perimeter protection systems. It offers a range of outdoor barriers, including microwave, infrared, triple technology and fence protection systems. These products are renowned for their effectiveness and reliability, finding application in high security contexts such as penitentiary institutions and banks.

Cooper operates in the security and emergency lighting sector, offering solutions for demanding industrial, residential and commercial environments. The company excels in four main areas: fire detection, intrusion protection, emergency lighting and escape route signaling. Cooper products guarantee reliable performance even in the most demanding conditions.

Bosch excels in its customer service which includes specialized technical support and ongoing training. Bosch's strength lies in advanced video analytics, considered among the best in the world, which identifies potential threats in real time. Bosch's approach is based on predictive technology, reliability, continuous innovation and data security.

Bentel Security offers both wired and wireless systems. Bentel products stand out for their remarkable flexibility, allowing tailor-made customizations for each customer, and for their high reliability. Bentel control panels integrate advanced features, including remote management and compatibility with home automation systems, maintaining simple installation.

Pyronix maintains an ongoing commitment to innovation and quality, having won numerous awards for its patented technologies. The company continuously invests in research and development, offering a wide range of security systems, including wired, hybrid and wireless solutions, which meet different installation needs.

Unstab stands out in the industrial panorama for the production of support accessories and anchoring systems. The company boasts a wide range of items characterized by solidity, safety and superior quality. Unstab's proposal stands out for its versatility, offering optimal fixing solutions for every type of equipment.

Risco's portfolio includes radio, wired and hybrid systems, all designed with exceptional flexibility to adapt to multiple operational scenarios. The versatility of Risco products is manifested in their ability to manage up to 512 zones, allowing for detailed customization based on specific security needs.

Vithra offers invisible sensors that integrate seamlessly with existing alarm systems. These devices stand out for their aesthetic discretion and high effectiveness in preventing intrusions. Thanks to advanced technologies, Vithra sensors guarantee precise threat detection, reducing false alarms and ensuring complete protection of the home.

OPTEX boasts over forty years of experience in the sector. OPTEX's longevity in the market is a testament not only to the excellence of its solutions, but also its ability to meet the ever-evolving needs of international customers.

TSEC creates innovative solutions that exceed current market standards, integrating sophisticated features and premium materials. The TSEC product range, which ranges from detection systems to intelligent access controls, is the result of a design process that combines engineering expertise and an in-depth understanding of modern security dynamics.

Paradox Security Systems' commitment is expressed in the creation of solutions characterized by a superior level of security and latest generation technological content, specifically developed to meet the most sophisticated needs of the security market.

Wolf Safety boasts a profound mastery of electronic technologies and microprocessor logic, both at a hardware and software level. What makes Wolf Safety unique is its ability to internally manage the entire life cycle of the product, from conception to production, up to marketing.

Texecom products are characterized by exceptional versatility and compatibility with the main security and automation systems. Texecom panels offer a robust platform for the centralized management of various functions, integrating perfectly with access control, CCTV and home automation systems.

EL. MO. provides vast know-how and cutting-edge tools, making use of a multidisciplinary team of experts. This group includes design engineers, security professionals and security managers. HELMET. positions itself as a strategic consultant, providing tailor-made solutions that integrate advanced technologies and innovative strategies.

Aritech Carrier stands out for the technological innovation and versatility of its products, which range from anti-intrusion systems to video surveillance solutions. The distinctive feature of these solutions is their almost unlimited expansion capacity, which allows for extensive and adaptable coverage.

AWACS Platinum is an advanced range of wireless alarm systems designed to ensure maximum security in domestic and professional environments. Equipped with dual frequency radio communication and signal anti-collision protocol, it offers reliability and aesthetic integration thanks to its ergonomic design. The range includes alarm panels, detectors, transmitters and accessories.

Concept Italy establishes itself in the anti-intrusion sector with its innovative security fog systems. The company offers advanced anti-theft devices that quickly generate non-toxic, residue-free mist, effectively preventing theft. The Concept fog generators, suitable for various environments, guarantee versatile protection with an effectiveness close to 100%.

AVS Electronics, part of the Riello Elettronica Group, stands out for the design and production of solutions ranging from burglar alarm systems to home automation, from access control to fire detection. It offers cutting-edge products such as the LUCKY and XTREAM alarm panels, intelligent keypads and wireless systems compatible with the latest smart home technologies.

EEA designs and produces security solutions, combining advanced electronic and software skills. EEA products, characterized by ease of installation and maintenance, are suitable for different contexts, from residential to industrial.

VIDEO SURVEILLANCE

Skilleye offers professional video surveillance systems for residential, commercial and industrial environments. The range includes multi-standard cameras up to 8MP (4K) with Starlight technology and AI video analytics, as well as hybrid XVRs for flexible management of analogue and IP cameras.

Uniview has established itself as a pioneer in the IP video surveillance sector. The company was the first to introduce this technology in China, where it currently occupies third position in the market. Its rapid growth led it to reach fourth place globally by market share in 2018.

Hanwha applies rigorous quality standards to all its products, reflecting the tradition of Korean engineering. Hanwha has pioneered the implementation of video analytics "at the edge," integrating advanced software solutions directly into cameras. This innovative approach offers greater efficiency, reduced response times and a decreased load on the network.

2N stands out as a pioneer in the building communications industry, having developed the world's first IP intercom and the first LTE intercom. The company offers a wide range of products, including UMTS solutions, GSM gateways, interphones and videophones, both analogue and IP. 2N products are renowned for their high build quality and extensive customization possibilities.

DoorBird establishes itself in the video surveillance sector with its IP video intercoms. These devices offer features like automatic notifications, HD video, and two-way audio. Users can interact with visitors remotely via smartphone or tablet. Technical features include wide-angle lens, 4D motion sensor, night vision and advanced encryption.

Wisenet WAVE, Hanwha's Video Management System, fluidly manages up to 64 high definition video streams simultaneously, offering infinite customization possibilities. With its intuitive interface, Wisenet WAVE simplifies the management of large volumes of video data and supports integration with third-party devices.

FLIR cameras use thermal imaging to detect infrared radiation, providing visibility in darkness, smoke or fog. Ideal for security, surveillance and monitoring, they guarantee high quality images and reliable performance in critical scenarios.

Genetec stands out as a leading provider of cloud-based video surveillance solutions, aimed at installers and system integrators. The company's mission is to improve safety standards and develop new levels of protection for a wide range of environments, from public offices to private homes.

Pelco has made a significant evolution in the visual safety industry. Born as a manufacturer of analog cameras, the company has successfully adapted to the digital age, expanding into the field of IP cameras. Its portfolio includes predictive video surveillance systems, advanced cameras, video recording and management systems, and sophisticated CCTV software.

BCS offers a wide range of products, including cameras of various types, digital video recorders and video servers. BCS solutions stand out for their adaptability to different business needs, offering features such as night vision, thermal and large storage space. The implementation of cloud technologies simplifies the management of the security infrastructure.

Unistab offers video surveillance and security support systems and products such as square section aluminum CQ poles, designed for optimal installation of electronic devices without adapters. The range also includes universal camera mounts, adaptable to various poles and devices.

FIRE DETECTION

Inim systems stand out for their integration with other technologies such as home automation and emergency lighting, offering complete protection of buildings. This combination of technological innovation, contemporary design and integration capabilities positions Inim as a reference in the sector, providing reliable and advanced systems for fire safety.

Elkron's consolidated experience translates into a range of innovative products, compliant with the most rigorous European regulations. These cutting-edge solutions meet the protection needs of the current market, offering advanced security systems for every context.

Vimo offers solutions with latest generation power supplies and power supply units, essential to guarantee the uninterrupted operation of fire detection systems. The production range is further enriched with high quality relay interfaces and a series of specialized accessories, designed to maximize the performance of fire prevention systems.

The Setronic product portfolio ranges from linear fire detectors to opacity analyzers, including a wide range of specialized instrumentation and accessories. The company stands out not only for the technological excellence of its products, but also for the complete technical assistance service, which accompanies customers from the design phase to maintenance.

Sensitron develops highly reliable sensors. The use of microprocessor technology guarantees superior performance in terms of precision and data management. Strict compliance with European Regulations ensures that all products meet the highest safety standards. Finally, the adoption of strict quality procedures consolidates Sensitron as a supplier of reliable and innovative solutions.

Thermostick Elettrotecnica is a leader in fire detection systems, offering advanced solutions to monitor smoke, heat, flames and gases. The products guarantee reliability and safety in complex environments such as industries, tunnels and Oil & Gas sectors.

Oggioni offers a complete range of high-precision sensors for the detection of toxic and explosive gases, integrated into Fire & Gas safety systems. The company provides efficient technical support and qualified after-sales service, guaranteeing expert assistance at every stage, from product selection to ongoing maintenance.

Hensel offers integrated systems that optimize energy management in buildings of various sizes and types, from residential to industrial. The Hensel product range ranges from compact electrical panels to complex distribution systems, all characterized by innovative design and ease of installation.

Riello Fire, part of the Riello Elettronica Group, establishes itself in the fire safety sector with innovative and technologically advanced products. The company offers Made in Italy solutions for civil and industrial applications. The flagship product is the XFIRE analog addressable control panel, an expandable and versatile system for automatic fire detection.

Tecnocontrol stands out in the sector of gas analysis for industrial applications. With over half a century of experience, Tecnocontrol has established itself as a point of reference for safety in industrial environments, providing precise and reliable solutions for the detection and monitoring of gases in various sectors where emission control is fundamental.

Aritech establishes itself in the fire detection sector by offering analogue/addressable control panels of the 2X-A series, suitable for both small systems and medium-sized network applications. These power plants stand out for their high-power loops and intuitive graphical interfaces. The Aritech range also includes sensors, manual warning devices and sirens.

NETWORKING

WP RACK & CABLING establishes itself as a high-tech company in the development and production of infrastructure solutions for IT environments. It specializes in rack cabinets, power distribution units (PDUs), cables and related accessories. WP RACK & CABLING's offer stands out for the innovation, robustness and flexibility of its products, adapting to the needs of various sectors.

Ubiquiti operates in the network technology sector, standing out for a wide range of hardware products and software solutions. UniFi Controller software represents the heart of the Ubiquiti ecosystem, offering intuitive and centralized network management. The company's excellence is based on three key elements: high reliability, constant innovation and a competitive quality-price ratio.

MikroTik has consolidated its presence in over 145 countries, standing out for two fundamental characteristics: the configurability of the firmware and the quality-price ratio. Firmware flexibility allows for in-depth device customization. At the same time, affordable prices have democratized access to professional networking solutions.

EnGenius is a pioneer in long-range and wireless communications solutions, boasting versatility and affordability. It offers a complete range of products for all wireless environments, including advanced network servers, innovative security solutions and wireless mesh networks for urban applications.

CISCO, founded in 1984, excels in developing intelligent networks and integrated architectures that combine hardware products, advanced services and software platforms. CISCO has contributed significantly to the evolution of internet infrastructure and the digital transformation of companies and institutions.

IBM manufactures and markets advanced computing hardware, software, middleware and services. Its portfolio includes technology infrastructure, hosting services and cloud computing solutions. IBM is also at the forefront of the development of artificial intelligence and quantum computing. The company's offering is completed with high-level consultancy services in the IT and strategic sector.

QNAP is Taiwanese excellence in the production of computing devices, specializing in network storage (NAS) solutions. QNAP excels in developing proprietary operating systems and advanced applications, offering intuitive interfaces and sophisticated data management capabilities. On the hardware front, the company produces reliable and high-performance NAS devices.

HPE Aruba Networking offers AI-powered networking solutions with a security-first approach, ensuring distinctive experiences everywhere without compromising cyber protection.

D-Link excels in several areas such as professional video surveillance and corporate security. It is renowned for its high-performance Wi-Fi solutions for business. In the field of LAN networks, it provides products that guarantee fast and reliable connectivity. Finally, it offers storage solutions for managing corporate data.

TP-Link establishes itself as a world leader in the supply of Wi-Fi devices, with an established presence in over 170 countries. TP-Link's distinctive element lies in its choice to keep production internally. This approach ensures consistent quality, allows for greater flexibility, optimizes production costs, accelerates innovation and increases product reliability.

Cambium Networks stands out with its innovative "wireless fabric". The company combines high-performance technologies with centralized, cloud-based management, enabling the creation of efficient and adaptable network infrastructures. Cambium Networks' cloud management platform simplifies configuration, monitoring and optimization.

PANDUIT stands out as a leading US company in the electronics components sector, specializing in infrastructure solutions for data networks and electrical energy applications. PANDUIT excellence is based on four core values: scalability, precision, security and reliability. These values characterize not only PANDUIT products, but also the services it offers.

Seagate Technology stands out as the world's second-largest hard drive manufacturer, with a history of innovation dating back to 1979. Seagate products find applications in a wide range of industries: from enterprise servers to desktop computers, from handheld devices to DVRs, from consoles to game like Xbox to portable audio players.

Western Digital

Western Digital stands out for its broad portfolio of storage technologies and devices, providing systems and solutions for both businesses and consumers. The company's offerings include a diverse range of products under renowned brands such as Western Digital, G-Technology™, SanDisk and WD.

4EMME, an evolution of the Carmet company which took place at the end of the 1990s, specialized in the production of cabinets and rack components for the management of data networks. Today it stands out on the market with a varied offering of six series of panels and cabinets. This diverse range responds to various customer needs by combining technological innovation and functional design.

ZyXel establishes itself as an innovator in the field of home connectivity, offering solutions that solve common problems of home networks. The company promises to eliminate buffering during streaming, ensuring smooth playback of multimedia content. ZyXel's advanced mesh technologies ensure complete WiFi coverage throughout your home.

ShinHo, founded in 2012, stands out for its innovation, highlighted by numerous national patents. Its core technical team has over 20 years of industry experience. The operational structure is based on two strategic hubs: Shanghai, which serves as the main operational headquarters, and a modern 20,000 square meter factory in the high-tech area of Bengbu, Anhui province.

ACCESS CONTROL

2N offers devices that combine smart controllers and readers, supporting different credentials such as RFID, Bluetooth, PIN and biometrics. The 2N Access Commander system allows centralized access management. The 2N IP intercoms integrate smart functions and video surveillance, while the 2N Mobile Key solution allows the use of the smartphone as a credential.

DoorBird establishes itself in the video surveillance sector with its IP video intercoms. These devices offer features like automatic notifications, HD video, and two-way audio. Users can interact with visitors remotely via smartphone or tablet. Technical features include wide-angle lens, 4D motion sensor, night vision and advanced encryption.

HID solutions stand out for their versatility and ease of use, allowing authentication through different methods: a simple touch, a rotation, the use of tags, a light pressure, the swipe of a card or simple proximity to the device. This variety of options ensures a fluid and intuitive user experience, integrating seamlessly into daily routines.

Satel, a Polish company, offers a complete range of devices that integrate alarm and access control systems. It is characterized by the use of advanced technologies such as biometric recognition and IP connectivity. The constant commitment to innovation ensures that Satel products always incorporate the latest technologies, guaranteeing maximum safety and ease of use.

Skilleye offers a cloud-based access control system that integrates multiple authentication modes, including biometrics, RFID, and PIN codes. The company places an emphasis on the scalability of its solutions and continuous innovation, incorporating emerging technologies such as artificial intelligence for facial recognition and behavioral analysis.

Plexa boasts an integrated and versatile platform for identifying people and vehicles. The offer ranges from RFid technology with tags or transponders to advanced biometric systems. For vehicle control, the company offers radio controls with rolling-code technology and automated license plate reading systems, without neglecting more traditional solutions such as magnetic card readers and keyboards.

AB TECNO stands out in the Italian market as a specialized importer of control and safety accessories, representing prestigious European brands such as JCM, XPR and WITT. In 2015, the company took a strategic step by registering the ABEXO brand, which since 2019 has become the vehicle for marketing internally developed products.

Abexo operates in the signaling, command and access control sector. The company is committed to offering a product catalog that stands out for its completeness, specialization and innovation in the field of accessories for automation and access control. Abexo's vision materializes in a diversified and constantly evolving offer.

JCM Technologies has an established presence in over 40 countries. The company excels in the development of advanced systems for door control in residential, industrial and commercial environments, offering solutions that combine technological innovation, reliability and ease of use. The versatility of JCM Technologies' offering adapts to a wide range of needs.

XPR excels in three main areas: advanced access control systems, intelligent home automation solutions and a wide range of mechanical, electrical, electronic and magnetic lock equipment. XPR's strength lies in its manufacturing capacity, enhanced by strategic partnerships and owned factories.

Witt excels in the production of advanced safety sensors, specialized accessories and gate automation systems compliant with the latest technical standards. Witt's strength lies in its notable production and management flexibility, which allows it to effectively manage orders of any volume.

IGTEK offers a range of professional products characterized by high modularity, which allows versatile use in different applications. This flexibility ranges from simple stand-alone door openers up to more complex and articulated access control systems, thus responding to a wide range of needs in the security sector.

CDVI offers a complete range of products that includes electric, electronic and magnetic locks. The offer extends to biometric fingerprint readers, guaranteeing personalized and secure access control. In the field of video surveillance, CDVI provides professional IP cameras for high-quality monitoring.

ITC excels in providing advanced audio technologies and integrated building automation systems, covering the entire project lifecycle, from design to testing. ITC's holistic approach is characterized by careful monitoring of each phase, ensuring that systems fully meet customer needs.

AlarmHub offers a system based on a ready-to-use radio transmitter that does not require electricity, GSM or Wi-Fi connection. The device is capable of detecting and communicating changes in the state of four separate inputs. Its independence from external networks guarantees continuous monitoring even in blackout situations or in areas with poor network coverage.

CABLES

Betacavi stands out for its active commitment to the development and dissemination of technical knowledge in the sector. The company participates in technical committees for the drafting of standards, helping to define industry standards. Betacavi also organizes training seminars in collaboration with important international partners, held at the offices of professional associations.

K.T.S. s.r.l., founded in 1991, is based on the family experience of its founder. The company stands out for its dedication to research and customer satisfaction, making use of specialized technicians and adopting high production standards.

Softing has established itself in the cable sector as a supplier of advanced solutions for the testing and certification of IT copper and fiber optic cabling, with over 40 years of experience in the Fieldbus and Industrial Ethernet sectors. Softing Italia, offers local support and expertise in the Italian market, developing innovative solutions for various sectors, including industrial and medical.

Fujikura, a Japanese company founded in 1885, produces fiber optic and electrical cables and telecommunications components. The company invests in research and development, introducing innovative technologies such as cables for 5G and beyond applications. Also renowned for its fiber optic splicing and testing tools, Fujikura maintains a global presence and commitment to sustainability.

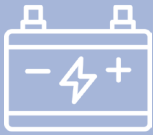

Prysmian's portfolio ranges from single-mode optical fibers for long-distance transmissions to OM1, OM2, OM3 and OM4 multimode fibers for short and medium range applications, also including special fibers for specific needs. Prysmian also supplies ready-to-use pre-connectorized optical cables, as well as a wide range of accessories and installation equipment, including connectors.

Draka, part of the Prysmian Group, is a leading company in the energy and telecommunications cables and systems sector. With over a century of experience, the company stands out for the high technology of its products, particularly in the field of elevators.

PANDUIT stands out as a leading US company in the electronics components sector, specializing in infrastructure solutions for data networks and electrical energy applications. PANDUIT excellence is based on four core values: scalability, precision, security and reliability.

UPS & BATTERIES

Legrand, a French industrial group of international importance, is a leader in electrical and digital infrastructures. The company stands out for its specialization in electrical components, offering products and solutions with high added value. Its range is designed to meet the needs of commercial, residential and industrial buildings, combining innovation, efficiency and reliability.

KERT, a company with thirty years of experience, excels in the design and production of energy and power systems. Its product range includes power supplies, voltage stabilizers, UPS and rescue groups for emergencies and anti-flooding. KERT stands out for the high robustness and reliability of its devices.

In 2007, APC was acquired by Schneider Electric, a renowned European multinational specialized in energy management and automation. This integration created a synergy of expertise, combining APC's expertise in data protection with Schneider Electric's expertise in energy optimization.

Yuasa has established itself in the battery sector, with forty years of experience characterized by constant innovation and adaptation. It offers superior product quality, excellent customer service and an extensive distribution network. The commitment to sustainability and energy efficiency has further strengthened Yuasa's role as a point of reference for energy solutions.

Remco establishes itself as a leading company in the battery sector, with over 25 years of experience in the field. Its longevity in the market is a testament not only to its deep technical expertise, but also its ability to adapt to changing energy needs. Remco's reputation is built on product quality and excellent customer service.

AUDIO & CONGRESS

ITC excels in providing innovative and customized Audio and Building Automation systems, ensuring that each solution fully meets customers' specific needs. The company's expertise extends from impeccable sound quality in audio systems to optimizing energy efficiency and comfort in automated buildings.

PASO stands out as a leading company in the sound diffusion and conference systems sectors, boasting a solid reputation in Italy and abroad. PASO's success is supported by a commercial structure made up of highly qualified professionals, who offer complete support from design to after-sales service.

LIGHTING TECHNOLOGIES

Mapam has been operating in the Italian market since 2015, offering four product lines for civil use. The company stands out for its network of multi-firm agents which guarantees complete national coverage. These professionals not only distribute products, but also provide specialized consultancy and technical support, establishing strong relationships with customers.

LED CO offers a wide range of LED lighting solutions for different applications, characterized by exceptional performance in terms of energy efficiency, light quality, design and durability. The company's commitment extends to sustainability, with the design of appliances that optimize energy consumption and offer eco-compatible solutions.

Lixit operates in the emergency lighting sector with production entirely made in Italy. The company is committed to guaranteeing high quality products, subjecting them to rigorous controls and tests in accordance with ENEC standards, thus ensuring excellent performance and long life.

Steinel offers sensor-based lighting systems. The range includes the RS PRO series with intelligent LED lamps for indoors and the Spot Way and Spot Garden series for outdoors. Steinel integrates IoT and home automation technologies, allowing remote control of lighting. The company places emphasis on energy efficiency and sustainability, developing low-consumption and long-lasting products.

Inim includes solutions for lighting control in its home automation systems. Through the Inim Home platform, the company allows intelligent management of lighting, allowing users to create personalized light scenarios and program the turning on and off of lights. Furthermore, these systems integrate with Inim safety devices.

TELECOMMUNICATIONS

2N

The 2N product range includes both analogue and IP interphones and videophones, GSM gateways and UMTS solutions, characterized by high construction quality and extensive customization possibilities. These characteristics make 2N a point of reference for reliable and innovative solutions, suitable for both residential and corporate contexts.

DoorBird establishes itself in the video surveillance sector with its IP video intercoms. These devices offer features like automatic notifications, HD video, and two-way audio. Users can interact with visitors remotely via smartphone or tablet. Technical features include wide-angle lens, 4D motion sensor, night vision and advanced encryption.

AVAYA

Avaya implements advanced technologies such as artificial intelligence, cloud computing and the Internet of Things to optimize business communication processes. Its portfolio includes contact center and unified collaboration solutions designed to improve operational efficiency and user satisfaction in modern, dynamic work environments.

Yeastar specializes in the development and production of IP PBXs and VoIP gateways. Yeastar products, characterized by versatility and scalability, integrate the latest VoIP technologies, offering advanced features to optimize communication processes.

Yealink

The Yealink range offers a vast selection of models suitable for both small offices and professional operator stations. The strong point of Yealink devices is their full compatibility with the SIP standard, which guarantees high interoperability with switchboards based on this technology.

ascom

Ascom Wireless Solutions has developed specific expertise in the design and implementation of advanced communications systems, tailored to the unique needs of various market segments. Ascom's portfolio includes customized solutions for healthcare facilities, manufacturing industries, correctional facilities, retail and hospitality industries.

snom

Snom stands out for its specialization in the design of professional VoIP phones based on open standards. The company's products are fully compatible with the open SIP protocol, ensuring excellent interoperability with leading SIP-based IP-PBX systems, including advanced solutions such as KalliopePBX.

Esse:ti stands out in advanced communication technologies for the elevator industry, offering excellent alarm systems. The heart of the company is the TLC Division, established as a point of reference in the telecommunications sector in Italy.

Gigaset

Gigaset offers a range of high-performance products, designed to meet the complex needs of modern working environments. Gigaset's strength lies in the combination of the excellence of its devices and the added value provided by its partner community, which collaborates to offer complete and personalized communication solutions.

Jabra GN

Jabra stands out as a world leader in the production of audio solutions and handsfree devices, excelling in both the business and consumer sectors. The company boasts consolidated expertise in the development, production and marketing of a vast range of audio products including earphones, speakerphones, wireless and wired headphones for mobile telephony.

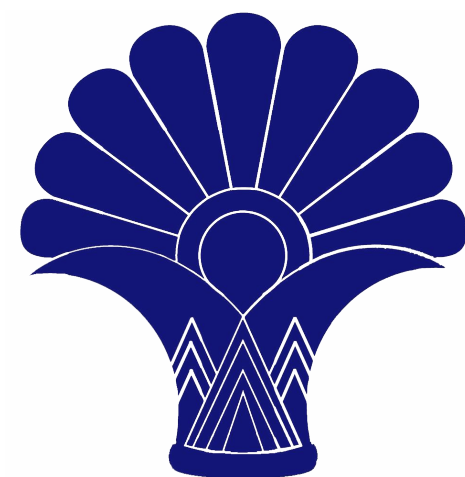

Poly was born in 2019 from the merger of Plantronics and Polycom, and operates in the audio and video communications sector. Poly headphones are renowned for their versatility and superior quality, finding wide application in various fields, including Unified Communications, contact centers, offices and homes, thanks to their audio performance and long-lasting comfort.

TOOLS & UTILITY

KNIPEX stands out in the hand tool industry by placing precision at the center of its manufacturing philosophy. The company recognizes precision as a fundamental element for the effectiveness and reliability of the pliers, guaranteeing a clean cut, a firm grip, accurate bending and fluid movement. This attention increases operator safety and product durability.
